WHY TO RESPRAY?

SAVE OVER 50%

Yes It's true. You can save over 50% by resurfacing your existing PVCu window frames or doors rather than replacing them. There is also a significant saving in knock on expenses like repainting new plaster and making good window sills etc.

GUARANTY

Our service is guaranteed to last. We are Ireland's approved applicators for PVC respray. The products do not just sit on the surface... No. They actually chemically bond to the surface. This means they can not peel or come off.

ANY COLOUR

We can respray your front door and windows inside and out to any colour you choose. After time sometimes white PVC windows can look a little tired. Now with uPVC respray you can either completely change the colour to a fashionable cream or grey or redo them in factory white.

All done on Site!

Most other window spraying companies use paint that attempts to stick to the substrate. The big difference with PVC Respray.com is that we use "Kolorbond", A unique molecular cross-bonding technology that cross-links to your surface, making the adhesion permanent.

IT'S ALL ABOUT THE PAINT!

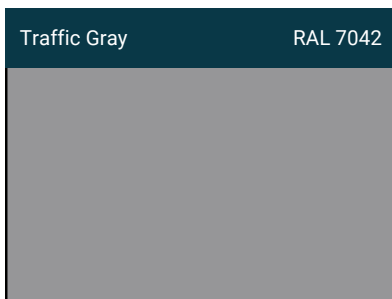

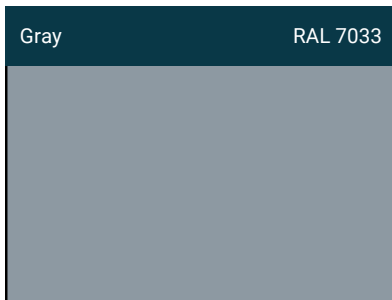

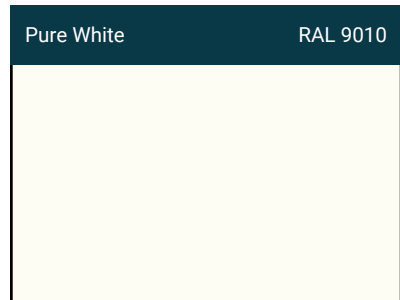

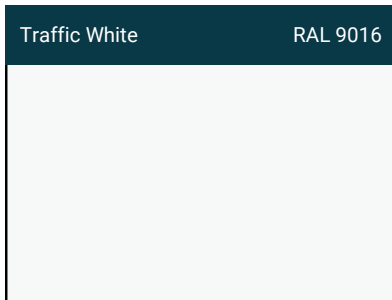

Most other window spraying companies use paint that attempts to stick to the substrate. The big difference with PVC Respray.com is that we use "Kolorbond", A unique molecular cross-bonding technology that cross-links to your surface, making the adhesion permanent.

PVC PAINT COLOURS

You'll be privy to a free colour-matching service, where professionals will assist with your selection. From a stately gray to a confident cream, you'll choose from a vast array of options. The interior of uPVC window frame respray will remain white so that it won't clash with your décor.

Or, if you prefer, opt for any colour inside and have the outside frame resprayed in a shade of white. If you go with white, consider muting the starkness by using ivory or crème. Several finishes are available, including silk, gloss, metallic and matt.

POPULAR PAINT COLOURS

Choosing your colours is the fun part, but the colour coating process itself is interesting.

A very specialised paint, which physically adheres to uPVC is mixed, using state-of-the-art computer-driven equipment. It creates another layer of coating that you will never need to repaint. Incidentally, uPVC paint dries within hours!!

White (RAL 9010)

Brown (RAL 8019)

Anthracite Grey (RAL 7016)

Black (RAL 9005)

Steel Blue (RAL 5011)

Fir Green (RAL 6009)
